Floor coverings installed using adhesives can be difficult to reuse or recycle on uplift, due to contamination.

IOBAC Installation Tabs enables floor coverings to be affixed securely throughout the life of the installation, yet cleanly and easily uplifted. This reversible fixing mechanism gives flooring a second life, vastly improving flooring circularity and making flooring manufacturers' take-back schemes easier to implement.

## Key facts

**Product name:** MagTabs® Adhesive-Free Flooring Installation

**Manufacturer name:** IOBAC

**Manufacture location:** Hampshire

**Product type:** Installation material

**Application:** Flooring

## Highlights

The magnetic side uses patented technology for high grab and clean removal. This incorporates a plant-based castor oil PU coating.

Compatible with the various sub-floor options such as raised access flooring.

Removes the need for costly floor cleaning and increases re-use potential.

The installation process is odour-free with no drying time required. Flooring can be trafficked immediately, minimising disruption to building operations.

Plasticiser, phthalate and low-VOC.

Made in the UK with a robust supply chain.
