“Qflow’s ground-breaking innovation in the construction industry offers a transformative solution to sustainability challenges. With a focus on reducing waste, carbon emissions, and enhancing resource efficiency across the supply chain”

The construction industry is notorious for its environmental impact, generating 62% of UK’s waste and 32% of all waste sent to landfill. Qflow recognised the pressing need for radical change within this industry. By developing innovative solutions, we address the inefficiencies through data driven insights that have long hindered sustainability progress.

Qflow’s solutions are aimed at all stakeholders in the construction industry, from contractors and developers to suppliers and regulators. Our platform provides an inclusive, accessible, and scalable solution for all participants to streamline processes, minimise waste, and reduce emissions.

Qflow’s impactful contribution is evident in the recently released UK Construction Industry Annual Waste Report 2023, showcasing a substantial reduction in waste generation, a decrease in carbon emissions, and a significant increase in resource efficiency management today.
