Carbon Supplier Mentoring Programme

Eve Bellers – Sustainability Manager

The problem

Our carbon footprint forecast to 2030 indicates that the supply chain will represent almost half of all emissions

Over 1/3 of our suppliers are Small-Medium Enterprises

Our solution

Free supplier mentoring in partnership with charity organisation Heart of the City

Involved workshops, clinics & 1:1 mentoring to calculate baseline and set Science Based Targets (SBTs)

The results:

- **29** suppliers set verified SBTs
- Number of UK SMEs with **SBTs increased by 20%** in 2022
- **41%** of our 2022 spend had a Science Based Target

GROSVENOR

How does the programme address ASBP Six Pillars

- Demonstrates commitment to training and knowledge sharing through supporting our SME suppliers
- Drives energy, resource and water efficiency through the delivery of emission reduction plans
- Strengthening supply chain relationships through aligning on shared mission of carbon reduction
- Increasing transparency through data collection, reducing reliance on estimates

Looking forwards

- Now repeating the programme for a small number of new SME suppliers in 2024
- Aim to only award contracts £1m value to suppliers holding verified Science Based Targets
- Maintain at least 40% supply chain by spend holding SBTs

Focus on:

- Measure progress through supplier annual reporting from suppliers
- Supplier action planning with key deliverables
- Opportunities to innovate and collaborate

GROSVENOR

99.9% UK businesses are SMEs

**To drive down emissions to net zero by 2050,
collaboration is crucial**

**Larger businesses need to take the lead and
engage their supply chains to generate a positive
ripple effect across the property industry and
beyond**
